

e.n.a.

okamura

Targeting co-creation spaces that require stylish solutions, e.n.a. was born from our collaboration with ITO Design where the goal was to create a chair that could represent Okamura's existing lineup. ITO Design is a German design firm that has produced a variety of furniture designs and received numerous design awards. To create a classic look, particular emphasis was placed on achieving the appearance of seamless unity between the shell and pipe leg frame.

With its seamless fusion of the backseat and shell, e.n.a. achieves a simple design and construction. With this product, we have endeavored to reduce CO₂ emissions by decreasing the number of parts.*
(*Compared to our previous products)

Comfort & Function

The backrest shell, seat and frame are formed from one single piece of resin, giving e.n.a. a sense of unity.

The softly curved shape of the back holds the body gently in the chair.

With its gradual curve, the seat shell provides excellent comfort.

The design also takes ease of stacking and carrying into consideration.

Up to three chairs can be stacked flat. Seat back covers protect the seat surfaces from damage during stacking.
